

**TO GIVE YOUR
BUSINESS THE
PROFESSIONAL
EDGE.**

Members of your staff may be able to join a Professional Body and they don't necessarily need a degree. Once in membership of a Professional Body, and if they are able to demonstrate the right mix of qualifications, experience and competence, your staff may be able to achieve recognition as Engineering Technicians (EngTech), Incorporated Engineers (IEng) or Chartered Engineers (CEng).

Professional Bodies exist to support their members and ensure that they have the up to date skills, knowledge and qualifications needed to work as competent professionals.

Sole traders, large multi-national companies, building services engineering businesses of all sizes already benefit from employing staff who are members of relevant Professional Bodies.

We've highlighted here some of the ways that employing staff who are Professional Body members could improve your business.

Consider Professional Body membership when recruiting or training and developing your staff, and when promoting your business.

Professional Bodies can help you to get more from your business by:

- Providing information about and access to the training you and your staff need
- Keeping you up to date with industry developments (including legislative and regulatory changes) that might affect your business
- Giving your business a competitive advantage in winning new contracts. Prospective clients may prefer to use a company that employs members of a Professional Body over one that does not.
- Entitling staff in some grades of membership to use prestigious post nominals – such as IEng ACIBSE – for example on business cards
